## **CURRICULUM VITAE**

### **B A C K G R O U N D**

Donato Pompo has worked within the ceramic tile, stone and terrazzo industries for over 35 years, and is a leading forensic expert and expert witness in the ceramic tile, stone and terrazzo industries. He has been certified as a Ceramic Tile Consultant (CTC) through the Ceramic Tile Institute of America (CTIOA) since 1979 and is a past chairman of the CTIOA Technical Committee. Donato is a member of the industry standard committees ANSI, ASTM, ISO, TCNA Handbook, and a member of the NTCA Methods and Standards committee. He has been a member of the Construction Specifications Institute (CSI) since 1982 and has been certified as a Construction Document Technologist (CDT) since 2000. Donato is a Council-certified Microbial Remediator (CMR). Donato worked 17 years as an importer/distributor of ceramic tile and stone, and worked over seven years for a manufacturer of installation products and systems for ceramic tile, glass tile, stone and terrazzo products. With a science education, an MBA, and over 35 years of tile and stone experience from installation to distribution to manufacturing, Donato is considered an expert investigator within the tile and stone industries.

---

### **P R O F E S S I O N A L E X P E R I E N C E**

**Ceramic Tile Installation:** Worked as a Union tile installer's helper for a Union ceramic tile contractor in Los Angeles, CA in the late 1960's. Continues to perform installations of tile and stone for personal projects. C54 – California Tile Contractor's License #1043005.

---

**17 Years as a Ceramic Tile and Stone Importer/Distributor:** Extensive experience consulting and assisting architects with their ceramic tile, glass tile, and stone selections and installation methods. Worked closely with ceramic tile and stone installers, as well as with the general contractors educating them and helping them design installation systems.

---

**7 Years as a Manufacturer of Installation Systems:** Over seven years working with a manufacturer of installation products and systems for ceramic, glass, stone tiles, and terrazzo. Provided technical consultation to architects and installers. Wrote installation specifications. Developed and ran training programs, investigated and resolved many job failure claims.

---

**35+ Years of Training:** Extensive experience with effective results in teaching installation methods for ceramic tile and stone to architects, installers, distributors, and manufacturers. Conducted presentations on technical information in order to prevent potential installation problems, and developed and provided training resources and programs.

---

### **W O R K H I S T O R Y**

**2002 to present:** President and Owner of Ceramic Tile And Stone Consultants, Inc., Jamul, CA

**2002 to present:** President and Owner of The University of Ceramic Tile and Stone, Jamul, CA

**1995 to 2002:** Regional Sales Manager, Western USA and Western Canada, Laticrete International, Bethany, CT

**Donato V. Pompo CTC CMR CSI CDT MBA**  
 P.O. Box 965  
 Jamul, CA 91935-0965  
 866-669-1550 (O) 619-669-2968 (Email) Donato@CTaSC.com

*[Work History – continued]*

**1994 to 1995:** National Account Representative, 13 Western States, Laticrete International, Bethany, CT

**1977 to 1994:** Executive Vice President, Southwestern Ceramic Tile & Marble Co., San Diego, CA

**1976:** Real Estate Agent, J & J Real Estate, Fort Leavenworth, KS

**1971 to 1975:** College with BioChemistry Major

**1969 to 1971:** U. S. Army Airborne Military Police and General’s Secretary

E D U C A T I O N

## Published Articles by Donato Pompo

### ***Quality Control in Ceramic Tile and Stone Specifications***

The Construction Specifier Volume 55, Number 10, October 2002 - Reviews the importance of clearly stating quality control guidelines in job specifications.

### ***From Babylonians to Baby Boomers, Tile Endures***

Kitchen & Bath Business, January 2003 - How to overcome the challenges in selling and designing with ceramic tile and stone.

### ***Online E-Learning Education Arrives to the Ceramic Tile and Stone Industry***

TileLetter, June 2003 - How you can take advantage of new, less expensive and more effective educational technology on the web.

### ***Substrate Prep & Quality Controls for Ceramic Tile & Stone***

The Construction Specifier Volume 56, Number 8, August 2003 - Reviews common job problems leading to failures and Quality Assurance and Controls for preventing failures.

### ***Stone Products Catalina Report CR026 September 2003***

Contributing author to a 186-page statistical research report on the U.S. Stone Industry trends.

### ***Stone Exceeds U.S. Ceramic Tile Consumption Value in 2002***

NTCA TileLetter, November 2003 - Reviews stone consumption trends in the U.S. compared to ceramic tile; focuses on the ceramic tile industry.

### ***Welcome to the Stone Age - Category Represents a Growth Opportunity for Dealers, Distributors***

Floor Covering Weekly Volume 252, Number 29, November 10, 2003 - Reviews stone consumption trends in the U.S. compared to ceramic tile; focuses on the floor covering industry.

### ***U.S. Stone Consumption Exceeds Ceramic Tile Value in 2002***

Stone World Buyers Guide 2004 Volume 20, Number 12, December 2003 - Reviews stone consumption trends in the U.S. compared to ceramic tile; focusing on the stone industry.

### ***Learning Proper Substrate Preparation and Quality Controls to Avoid Failures***

NTCA TileLetter March 2004 - Reviews common ceramic tile and stone failures and explains how to avoid them with proper substrate preparation with good quality control procedures.

### ***More than One Way to Skin a Building - Ceramic Tile, Brick, and Natural Stone Veneers*** - The Construction Specifier Volume 57, Number 6, June 2004 – Architectural review of exterior veneers.

### ***Exterior Adhered Veneer Test EXCEEDS 250% of Seismic Requirement... a New Opportunity for Ceramic Tile and Stone Sales***

NTCA TileLetter, September 2004 - Case Study of the new San Diego PETCO Ballpark, which reviews scratch and brown and cementitious backerboard unit methods with good quality control procedures.

### ***Stone Products Catalina Report CR039 March 2006***

Contributing author to a 214-page statistical research report on the U.S. stone industry trends.

**[Published Articles by Donato Pompo –continued]**

***Tile and Stone Finishes for Restrooms – Values, Challenges and Avoiding Failure***

The Construction Specifier, Volume 59, Number 4, April 2006 – Glass, stone and ceramic finishes can provide a luxurious look for restrooms in hospitality environments. However, water intrusion often leads to failure. Quality control, good installation, and knowledge of the various standards are crucial.

***Stone’s Grip on the Marketplace – Second Industry Report Shows Stone Consumption Continues Upward Climb***

TileDealer, September/October 2006 – Reviews the booming U.S. stone industry, citing important statistics on stone consumption, imports and pricing in 2005, and projected growth rate.

***Research Shows Stone Consumption Continues Upward Climb – According to a new Stone Industry Report, the market for natural stone in the U.S. is continuing to grow in terms of volume as well as value.***

Stone World Guide 2007 Volume 23, Number 12, December 2006 - Reviews stone consumption trends in the U.S. compared to ceramic tile; focusing on the stone industry.

***Mold: The Problem or the Symptom?***

TileDealer, January/February 2007 - The first article in a three-part series dealing with the affects of mold in the ceramic tile and stone industry.

***The Growing Concern about Mold: Legal Complications, Part 2***

TileDealer, March/April 2007 - The second article in a three-part series dealing with the affects of mold in the ceramic tile and stone industry.

***Choosing Substrates and Installation Systems for Ceramic Tile and Stone Tile***

TileDealer, September/October 2007 – Deciding which substrate to use, how to prepare it, and which installation systems are best to complete the job.

***How Training and “E-learning” Can Improve ROI***

Floor Covering Institute Blog, May 19, 2010 <http://blog.floorcoveringinstitute.com/> On-line education is an effective, cost-efficient way to train salespeople and reduce expenses, increase your competitive edge and improve the return on investment spent on training.

***Natural and Manufactured Stone Products Catalina Report CR065 July 2010***

Contributing author to a 250-page statistical research report on the U.S. stone industry trends.

***Stone floor construction - good data leads to intelligent decisions and market strategies;***

Floor Covering Institute Blog, October 5, 2010 <http://blog.floorcoveringinstitute.com/>; You are only limited by what you don't know. Stone statistical data and trends was limited until Donato Pompo and Catalina Research collaborated and published the U.S. Stone Product reports.

***Quality control - the best way to avoid ceramic and stone installation failures;***

Floor Covering Institute Blog, December 10, 2010 <http://blog.floorcoveringinstitute.com/>; The best way to ensure quality installations is through a Project Quality Control Plan.

***Hollow Sounding Tile May Signal Installation Problems***

The Commercial Flooring Report Volume 38 June 2011 - Hollow sounding tiles in an installed tile application may or may not mean there is a problem. A tile installation can be hollow for a number of reasons and the only way for sure to determine if there is a problem is to intrusively remove tiles to evaluate the underlying conditions.

**[Published Articles by Donato Pompo –continued]**

**Flexible, affordable training means adapting to and using technology;** Floor Covering Institute Blog, June 29, 2011 <http://blog.floorcoveringinstitute.com/>; Quickly evolving information and products makes education more important than ever. Training used to mean taking the sale force out of the field. But these days that isn't always necessary.

**Top cause of failed shower installations? Installer training;** Floor Covering Institute Blog, September 13, 2011 <http://blog.floorcoveringinstitute.com/>; We have learned that ceramic and stone installation failures are not usually the result of one deficiency, but rather a combination of compounding deficiencies.

**Market Strategy for a Tough Economy;** Floor Covering Institute Blog, November 4, 2011 <http://blog.floorcoveringinstitute.com/>; Whether you are part of the ceramic tile or stone industry, which is my specialty, or even part of the floor covering industry, the same business and marketing principals apply and you need to go through the same exercise to answer the following questions and prepare your business strategy...

**Good Specs Mean Good Tile and Stone Installations\*** – The Construction Specifier, Volume 64, Number 12, December 2011 – Ceramic tile, natural and manufactured stone, and glass tile have rapidly evolved - it is not a simple matter to determine what, where, and with which something should be used. Consequently, it is more important than ever for the specifier to have thorough and clear quality assurance and quality control sections in their specifications.

<http://www.kenilworth.com/publications/cs/de/201112/index.html>, page 30.

- \*Received The Construction Specifier Article of the Year Award for this article -

**Shrinkage leads to Indent Fractures in Stone** - NTCA TileLetter November 2011 - Shrinkage is not new. In fact, it's expected to occur within setting materials. What has changed is that much more stone is being installed today, over different substrates and substrate conditions.

**Good-quality Specifications result in good-quality tile and stone installations** – TADA, Tile for Architects, Designers and Affiliates - Volume 1, Issue 1, April 2012 – Ceramic tile, natural and manufactured stone, and glass tile have rapidly evolved - it is not a simple matter to determine what, where, and with which something should be used. Consequently, it is more important than ever for the specifier to have thorough and clear quality assurance and quality control sections in their specifications.

**Intelligent merchandising in the floor covering showroom;** Floor Covering Institute Blog, May 02, 2012 <http://blog.floorcoveringinstitute.com/>; In a ceramic tile and stone showroom the two biggest challenges for customers are visualizing how the tile or combination of tiles will look installed in the home and determining which tiles are suitable for their intended application. The key to solving that challenge is to train sales people so they are knowledgeable and competent showroom consultants utilizing intelligent merchandising.

**Avoiding the Fall - Specifying ceramic, glass tile, stone, and terrazzo for slip**

**Resistance** – The Construction Specifier, Volume 65, Number 10, October 2012 – Slip resistance, ease of maintenance, and application type are all very important to understand when specifying ceramic tile, glass tile, stone, terrazzo, or any other hard surface material. What degree and type of traffic a tile surface will experience is important, as well as whether it is an interior, exterior, level, or sloped application that will be subjected to dry, wet, or frozen conditions. Specifying the wrong product for the intended use can be a liability to both the specifier as well as to his or her client. The solution to all of these potential challenges are to qualify the suitability of the tile and stone products for the intended application before specifying them and, if necessary, hire a consultant who can help make educated decisions.

**[Published Articles by Donato Pompo –continued]**

**Writing Quality Stone Specifications** – Building Stone Magazine - Fall 2012 – With stone continually being used in new and unique applications, writing quality specifications is critical to ensure a successful installation. It is not a simple matter to determine what, where, and with which something should be used. Consequently, it is more important than ever for the specifier to have thorough and clear quality assurance and quality control sections in their specifications.

**Specifying Natural Stone** – Construction Canada, Volume 55, Number 2, March 2013 – While there may be visual similarities, few materials can replicate the actual sustainable or durable qualities of natural stone. Although there are many different types of Natural stone with different physical properties - so it is not a simple matter to determine what, where, and with which something should be used. Consequently, it is more important than ever for the Canadian specifier to have thorough and clear quality assurance and quality control sections in their stone specifications. <http://www.kenilworth.com/publications/cc/de/201303/index.html>, page 80.

**Specifying Ceramic, Glass, and Stone Tiles for Exterior and Interior Wet Areas Understanding the importance of slope, weeps, and flashing** – The Construction Specifier, Volume 66, Number 5, May 2013 – Exterior decks and balconies, and interior wet areas are more prone to problems due to their exposure to large volumes of water. Failures of these areas are typically due to a combination of installer error, using improper materials, and not having thorough specifications and details. The three common deficiencies found are the lack of an adequate slope-to-drain at the waterproof membrane surface, plugged drain weep holes, and the lack of adequate waterproof flashing to keep moisture from migrating into the substrate and tile or into adjacent materials causing expensive collateral damages. <http://www.kenilworth.com/publications/cs/de/201305/index.html>, page 10.

**Natural and Manufactured Stone Products Catalina Report FC083 June 2013**  
Contributing author to a 230-page statistical research report on the U.S. stone industry trends.

**Hollow-Sounding Tiles may Signal Installation Problems** - NTCA TileLetter July 2013 - Hollow sounding tiles in an installed tile application may or may not mean there is a problem. A tile installation can sound hollow for a number of reasons and the only way for sure to determine if there is a problem is to intrusively remove tiles to evaluate the underlying conditions (long version) <http://ntca-tada.com/?p=855>.

**Hollow-Sounding Tiles may Signal Installation Problems** - NTCA TADA Online July 26, 2013 - Hollow sounding tiles in an installed tile application may or may not mean there is a problem. A tile installation can sound hollow for a number of reasons and the only way for sure to determine if there is a problem is to intrusively remove tiles to evaluate the underlying conditions (short version).

**Specifying Movement Joints and Sealants for Tile and Stone - Reviewing current industry standards and design options** – The Construction Specifier, Volume 66, Number 10, October 2013 – When there is a tile or stone failure, a contributing factor is often the lack of properly installed movement joints. Just like concrete sidewalks and bridges, tile and stone need to have movement joints to control the anticipated movements within a structure. Tile and stone will expand and contract when it is subjected to heat/cold or moisture/dryness. It is critical for architects to properly specify the design, materials, and layouts of movement joints. <http://www.kenilworth.com/publications/cs/de/201310/files/10.html>, page 10.

**[Published Articles by Donato Pompo –continued]**

***Installing ceramic tile, glass tile, and stone in interior wet areas*** - NTCA TileLetter January 2014 - Interior wet areas are more prone to problems due to their exposure to large volumes of water. Failures of these areas are typically due to a combination of installer error, using improper materials, and not having thorough specifications and details. The three common deficiencies found are the lack of an adequate slope-to-drain at the waterproof membrane surface, plugged drain weep holes, and the lack of adequate waterproof flashing to keep moisture from migrating into the substrate and tile or into adjacent materials causing expensive collateral damages. Page 64.

***Why movement joints and sealants must be installed in tile and stone installations*** - Current industry standards and design options - NTCA TileLetter May 2014 - Industry standards say that all tile installations must have movement joints. If you don't install movement joints, and there is some problem with the tile installation, then the fingers will be pointing your way and you will be held responsible even if the problem isn't directly related to the lack of movement joints. Lack of movement joints can be a contributing factor to many different types of tile failures, so it's not worth the risk to exclude them from your installations. Page 54.

***Tile and Stone Training – Ceramic Tile, Glass Tile and Stone Training: Avoid Costly Problems with Continued Education*** – Floor Covering Installer July/August 2015 - Not unlike doctors, attorneys, accountants and other professionals, tile installers must keep up with industry standards and other changes within the industry. This requires each professional to commit time each year for continued education training. <http://digital.bnpmmedia.com/publication/?i=264058&p=36>

***Tile and Stone Lippage – What is acceptable (and how do you specify it)?*** – The Construction Specifier August 2015 - Excessive tile lippage can be avoided with quality architectural specifications that include adequate testing and quality control processes. It is typically due to a combination of substrates not properly prepared, improper installation methods, improper use of materials, and poor installer workmanship performance. Perceived excessive tile lippage is often because of inappropriate lighting design, too narrow of grout joints, and not following industry recommendations. In some cases, where perceived excessive tile lippage is unavoidable, it may be due to false expectations by the specifier or client. <http://www.kenilworth.com/publications/cs/de/201508/> Page 44.

***Natural and Manufactured Stone Product Industry Report FC094 December 2015***  
Contributing author to a 238-page statistical research report on the U.S. stone industry trends.

***Tile and Stone Lippage – What is acceptable and how do you avoid excessive tile lippage through quality tile and stone installations? Part 1 of 2*** – TileLetter February 2016 - Excessive tile lippage can be avoided with quality installations. It is typically due to a combination of substrates not properly prepared, improper installation methods, improper use of materials, and poor installer workmanship performance. Perceived excessive tile lippage is often because of inappropriate lighting design, too narrow of grout joints, and not following industry recommendations. In some cases, where perceived excessive tile lippage is unavoidable, it may be due to false expectations by the specifier or client.

***Tile and Stone Lippage – What is acceptable and how do you avoid excessive tile lippage through quality tile and stone installations? Part 2 of 2*** – TileLetter March 2016 - Excessive tile lippage can be avoided with quality installations. It is typically due to a combination of substrates not properly prepared, improper installation methods, improper use of materials, and poor installer workmanship performance. Perceived excessive tile lippage is often because of inappropriate lighting design, too narrow of grout joints, and not following industry recommendations. In some cases, where perceived excessive tile lippage is unavoidable, it may be due to false expectations by the specifier or client.

**[Published Articles by Donato Pompo –continued]**

**Why you need to learn how to install gauged porcelain tile slabs/panels** –TileLetter November 2016 – Gauged porcelain tile panels/slabs are the latest and greatest buzz in the tile industry. These tiles are 5' x 10' or larger and they range in thickness from 1/8" to 3/4". These tiles require new tools and methods for installing them. Installers need to learn how to install these tiles, which will help them differentiate themselves from their competition and allow them to get more jobs and make more money.

**Specifying Tile and Stone on Concrete – How much lippage is too much?** – The Construction Canada June 2016 - Excessive tile lippage can be avoided with quality architectural specifications that include adequate testing and quality control processes. It is typically due to a combination of substrates not properly prepared, improper installation methods, improper use of materials, and poor installer workmanship performance. Perceived excessive tile lippage is often because of inappropriate lighting design, too narrow of grout joints, and not following industry recommendations. In some cases, where perceived excessive tile lippage is unavoidable, it may be due to false expectations by the specifier or client. <http://www.kenilworth.com/publications/cs/de/201508/> Page 56.

**Curbless Shower Design: Requirements and Options** –TileLetter March 2016 – Curbless showers are not only required for the handicap and better for the aging population, but they have become popular and practical. This article reviews the proper design and installation requirements and recommendations for curbless showers, as well as reviewing the various building codes and Americans with Disability ACT (ADA) requirements.
